# SANATANA RESOURCES INC.

## Management's Discussion and Analysis Year Ended March 31, 2018

---

*This management's discussion and analysis ("MD&A") contains certain forward-looking statements that are prospective and reflect management's expectations regarding Sanatana Resources Inc.'s ("Sanatana" or the "Company") future growth, results of operations, performance and business prospects and opportunities. Forward-looking information can often be identified by forward-looking words such as "anticipate", "believe", "expect", "goal", "plan", "intend", "estimate", "may" and "will" or similar words suggesting future outcomes, or other expectations, beliefs, plans, objectives, assumptions, intentions or statements about future events or performance. All statements, other than statements of historical fact, included in this MD&A including without limitation, statements regarding potential mineralization and resources or reserves, estimates of future production, unit costs, costs of capital projects and timing of commencement of operations, exploration results and future plans and objectives of Sanatana are forward-looking statements that involve various risks and uncertainties. There can be no assurance that such statements will prove to be accurate, and actual results and future events could differ materially from those anticipated in such statements. Important factors that could cause actual results to differ materially from Sanatana's expectations are disclosed in its documents filed from time to time with the TSX Venture Exchange (the "TSX-V") and other regulatory authorities and include, but are not limited to, failure to establish estimated resources and reserves, the grade and recovery of ore to be mined varying from estimates, capital and operating costs varying significantly from estimates, delays in obtaining or failures to obtain required governmental, environmental or other project approvals, inflation, changes in exchange rates, fluctuations in commodity prices, delays in the development of projects and other factors.*

*Shareholders and prospective investors should be aware that these statements are subject to known and unknown risks, uncertainties and other factors that could cause actual results to differ materially from those suggested by the forward-looking statements. Readers are cautioned not to place undue reliance on forward-looking information. By its nature, forward-looking information involves numerous assumptions, inherent risks and uncertainties, both general and specific, that contribute to the possibility that the predictions, forecasts, projections and various future events will not occur. Sanatana undertakes no obligation to update publicly or otherwise revise any forward-looking information whether as a result of new information, future events or other such factors which affect this information, except as required by law.*

### **Introduction**

This MD&A was prepared as of July 30, 2018 and should be read in conjunction with the Company's audited financial statements and related notes for the year ended March 31, 2018. This MD&A is intended to provide the reader with a review of the Company's performance for the year ended March 31, 2018 and through to the date of this report, and the factors reasonably expected to impact future operations and results. This MD&A contains forward-looking statements that are subject to risk factors set out above.

The Company's financial statements for the year ended March 31, 2018 have been prepared in accordance with International Financial Reporting Standards ("IFRS"), as issued by the International Accounting Standards Board and interpretations of the International Financial Reporting Interpretations Committee.

All financial statement amounts in this MD&A are in Canadian dollars unless otherwise noted.

### **Incorporation and Listing Information**

Sanatana was incorporated under the British Columbia *Business Companies Act* on June 25, 2004. In November 2005, the Company became a reporting issuer in every province and territory

**SANATANA RESOURCES INC.**  
**Management's Discussion and Analysis**  
**Year Ended March 31, 2018**

---

of Canada, except Québec. The Company's common shares trade on the TSX-V as a mining exploration and development company under the symbol STA.

## **Operating Report**

The Company is an exploration stage company and is engaged in the acquisition, exploration and development of exploration and evaluation assets. The Company is focused on the Jackfish gold property in Ontario.

Sanatana's exploration programs are carried out under the supervision of the Company's vice president of exploration, Buddy Doyle, and exploration manager, Troy Gill. Mr. Gill meets the qualified person requirements of National Instrument 43-101 ("NI 43-101") and is responsible for the geoscientific and technical disclosure contained in this document.

## **Corporate Developments**

- In July 2018, the Company entered into agreements with two of the three vendors of the Jackfish Property (defined below) to defer option payments of \$100,000 from June 2018 to December 2018. The Company is currently in default under the third option agreement but seeking an extension on the same terms. See *Jackfish Property* below.
- In May and June 2018, the Company closed a non-brokered private placement issuing 10,000,000 flow-through shares at \$0.05 per unit for gross proceeds of \$500,000. See *Private Placement* below.
- In January 2018, the Company signed an agreement to acquire the Santoy Property adjacent to the Company's Jackfish Property, see *Santoy Property* below. The transaction was approved by the TSX-V in April 2018.

## **Mineral Properties**

### ***Jackfish Property***

#### *Overview*

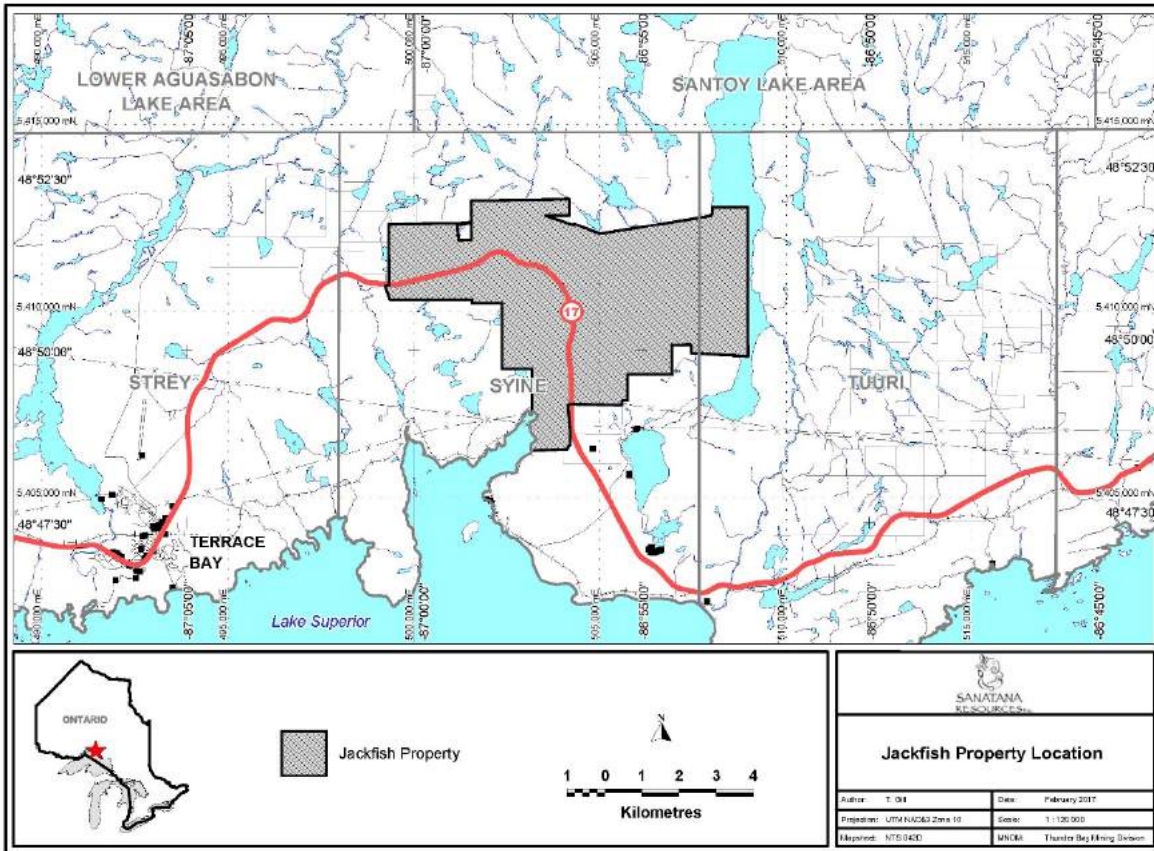

In February 2017, the Company entered into three option agreements that allow Sanatana to acquire a 100% contiguous interest in the Jackfish property, located in Ontario (the "Jackfish Property"). The transaction was approved by the TSX-V in June 2017.

#### *Jackfish Property Description*

The Jackfish Property is located on the northern shores of Lake Superior, 20 km east of Terrace Bay via Highway 17, Ontario. The option agreement property originally comprised 34 mining claims covering 3,664 hectares (9,054 acres). Now under the new Mining Lands Administration System (MLAS) introduced April 9, 2018, the property has increased to an area of 3,769 hectares (9,313 acres), and is described in terms of 313 cell mining claims, including 159 boundary cell mining claims, many of which are shared internally by claim holders within the property area.

**SANATANA RESOURCES INC.**  
**Management's Discussion and Analysis**  
**Year Ended March 31, 2018**

*Map of the Jackfish Property Location:*

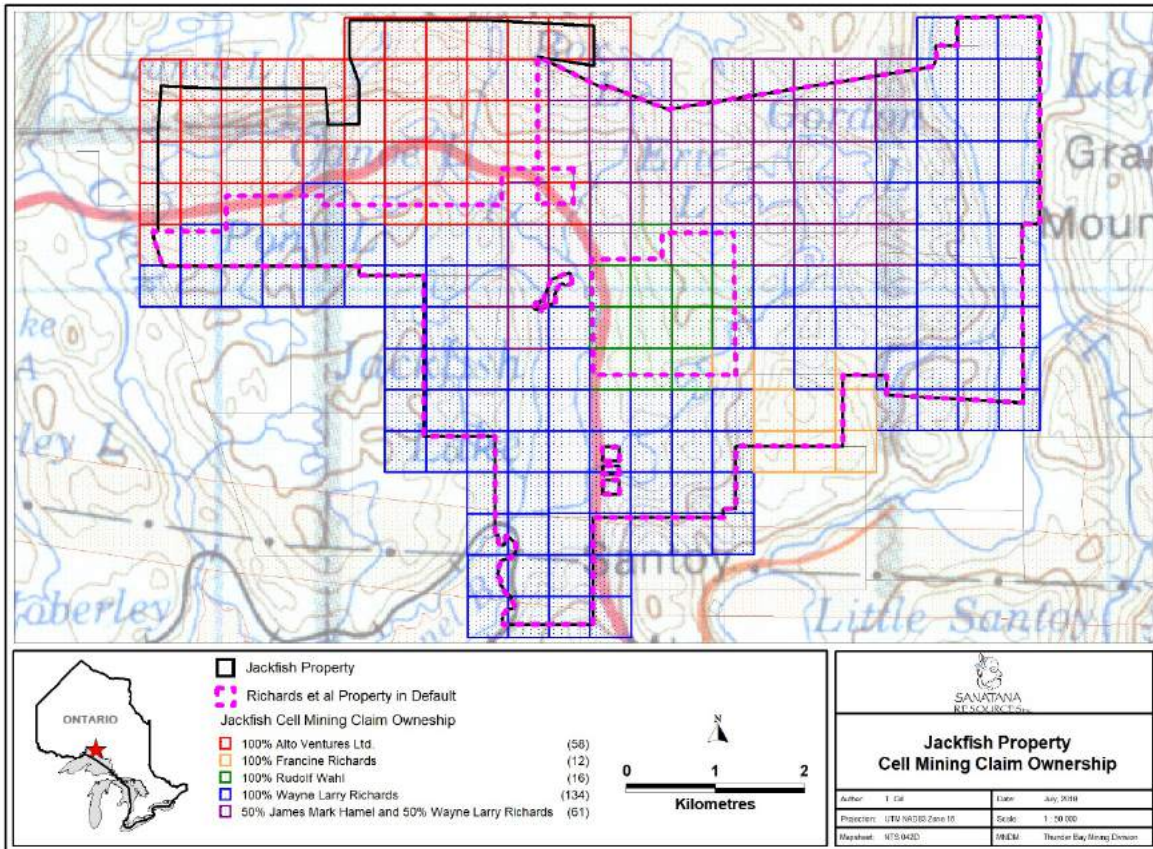

The Jackfish Property is a consolidation of three separately owned groups of mining claims through option agreements with another junior exploration company Alto Ventures Ltd. ("Alto"), an individual prospector Rudy Wahl ("Wahl") and a group of prospectors (referred to as "Richards et al" for convenience). The Company is currently in default under the terms of the Richards et al lands and the affected area is shown on the following map.

# SANATANA RESOURCES INC.

## Management's Discussion and Analysis Year Ended March 31, 2018

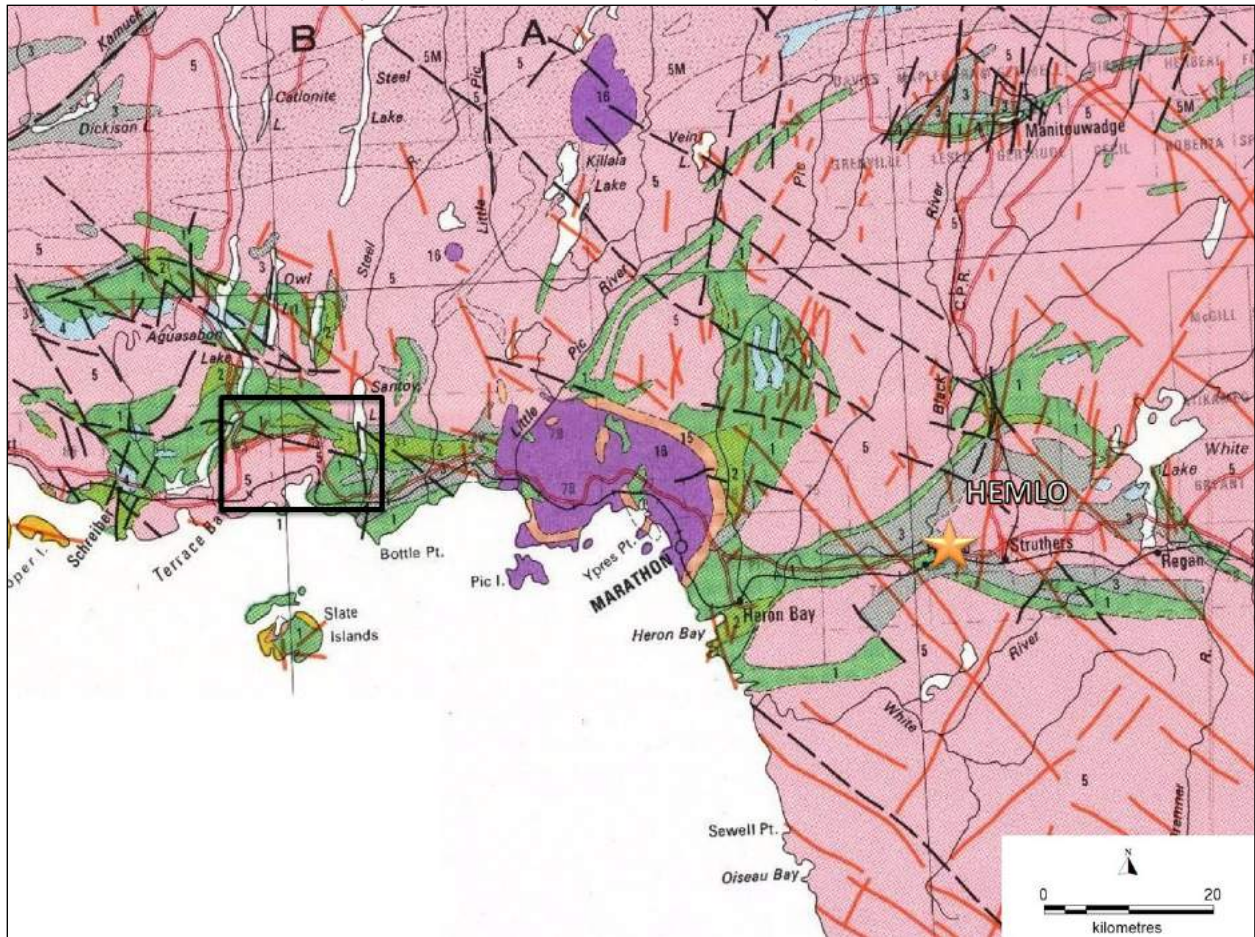

Map of the Jackfish Property Mining Claims by Ownership:

Geologically, the Jackfish Property lies within the Wawa subprovince of the Superior province of the Canadian Shield, specifically the metavolcano-sedimentary Schreiber-Hemlo greenstone belt. The belt is known for its namesake Hemlo gold operations (Barrick Gold Corporation) and, although similar geological and structural targets analogous to Hemlo exist in the greenstone rocks of the northern parts of the Jackfish Property, the focus is an area containing high-grade gold bearing veins within the granitic rocks on the eastern margin of the Terrace Bay Batholith, that underlie the Jackfish Property. There is also an interesting copper-in-soil anomaly located on the north-eastern part of the Jackfish Property.

**SANATANA RESOURCES INC.**  
**Management's Discussion and Analysis**  
**Year Ended March 31, 2018**

*Map of the Jackfish Property area within the Schreiber-Hemlo greenstone belt:*

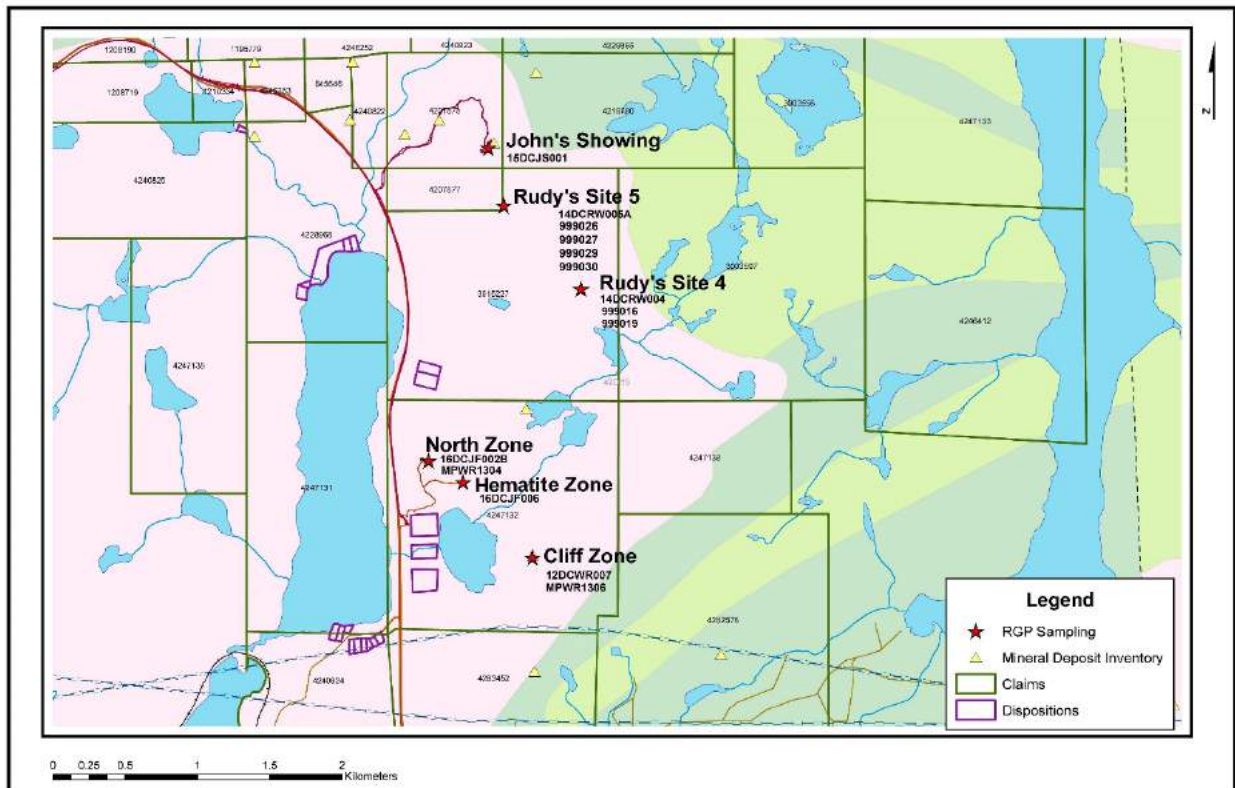

The following table shows the best gold assay results achieved by the Ontario Geological Survey (“OGS”) in its grab sampling program over a four-year period and the below map shows the location of the grab samples. Note that grab samples are selective by nature and do not represent intervals of mineralization hosted on the Jackfish Property.

**SANATANA RESOURCES INC.**  
**Management's Discussion and Analysis**  
**Year Ended March 31, 2018**

*Table of Best Gold Assay Results from OGS Grab Samples:*

Sample ID	Au (g/t)	Location
16DCJF002B	34.71	North Zone
MPWR1304	2.38	North Zone
12DCWR007	43.89	Cliff Zone
MPWR1306	27.77	Cliff Zone
16DCJF006	4.73	Hematite Zone
15DCJS001	0.98	John's Showing

**Management's Discussion and Analysis**  
**Year Ended March 31, 2018**

---

*Exploration Target Rationale*

The exploration potential of the Jackfish Property derives from the number of isolated gold occurrences that have been identified to date simply by prospecting the outcrops and the high-grade gold values that have been returned from sampling these showings, as confirmed by the OGS grab sample results.

The Jackfish Property setting was thought to be analogous with a similar style of quartz veining within the Bourlamaque Batholith, Val d'Or, Quebec, where gold mineralization occurs in en-echelon (stacked) quartz veins associated with shear zones cutting through the granitic intrusive. This style of mineralization poses targets of moderate to high grade gold in the range of 5 to 9 g/t Au with modest contained ounces in the hundreds of thousands of ounces to one or two-million-ounce range. Knowledge about breccia hosted and fracture controlled gold mineralization within granitic intrusive bodies, acquired from the Company's work at its previously held Watershed project, offers potential for larger tonnage and contained gold ounces targets within the Terrace Bay Batholith.

*Current Activities*

The Company engaged Ronacher Mackenzie Geoscience to compile an NI 43-101 Technical Report on the Jackfish Property which it filed in June 2017. This report is available on SEDAR.

Having made the first option payments, Sanatana has initiated an exploration program on the Richards and Wahl ground for which the Company has an exploration permit. The program's objective is to thoroughly test the gold tenor of the known occurrences and delineate links between the isolated occurrences. Work completed so far includes outcrop stripping, rock channel cutting and sampling of previously discovered high-grade gold showings, ground very low frequency electromagnetic ("VLF-EM") surveys, an airborne unmanned aerial vehicle ("UAV") based magnetic survey over the same area of interest as the VLF-EM and a small scale horizontal loop electromagnetic ("HLEM") survey over a previously identified copper soil sample anomaly. Key locations of the exploration activities are shown on the exploration summary map.

## **SANATANA RESOURCES INC.**

### **Management's Discussion and Analysis Year Ended March 31, 2018**

---

VLF-EM ground survey coverage from the area of the Cliff and North Zone northwards to cover much of the Wahl property and the copper-in-soil anomaly has been completed for a total of 29 line kilometres at 200-metre line spacing over an area of approximately 4.9 square kilometres. Superior Exploration, Ontario completed this survey using a handheld Geonics EM-16 VLF receiver and images of modelled apparent resistivity generated by inversion processing. In addition, Company field personnel collected a further 1.9 line-kilometres of infill VLF readings along 20-metre lines over the Rudy #7 target and 100 metre lines between the North and Hematite Zones.

Conductivity anomalies arising out of the VLF survey have been prospected in the field, although no outcrop was observed at the locations to help explain the anomalies. The additional lines of data have improved the resolution of anomalous subsurface conductors interpreted to be associated with the outcropping high-grade gold vein mineralization at Rudy #7 and from Hematite to North Zone.

A UAV-platform-based airborne magnetic survey has now been completed covering the same high priority gold target area of 5.6 square kilometres for a total of approximately 125 line-kilometres at a line spacing of 50 metres. Stratus Aeronautics, British Columbia carried out this survey using an in-house designed third generation prototype multi-rotor UAV platform with a cesium magnetometer that records readings every 1.1 metres along lines. The survey covered an area of 5.6 square kilometres over the core of the high priority high-grade gold showings from the Cliff in the south to the Creek showing and the copper in soil anomaly to the north.

The enhanced understanding of the overall geological and structural setting underlying part of the property, based on the new geophysical data, coupled with a significant copper soil anomaly previously identified on the property, with copper values up to 769 ppm, and a grab sample of mineralized float from the area that returned assay values of 14.9 g/t Au, 6.5% Cu, 7.5% Pb and 1.0% Zn lead to the Company undertaking a ground HLEM survey to test for subsurface conductivity perhaps due to the presence of massive sulphide. Abitibi Geophysics, Quebec carried out the survey using an Apex Parametrics MaxMin I reading frequencies of 110, 440, 1760 and 7040 Hz. Six lines of about 500 to 700 m length and at 100 m spacing were surveyed at 12.5 m stations and a 50 m coil separation for a total of 3.45 line km. Three bedrock EM anomalies were delineated that perhaps reflect the variation in lithology and structural breaks related to the gold and other base metal mineralization, although no distinct and isolated conductor was defined by the survey.

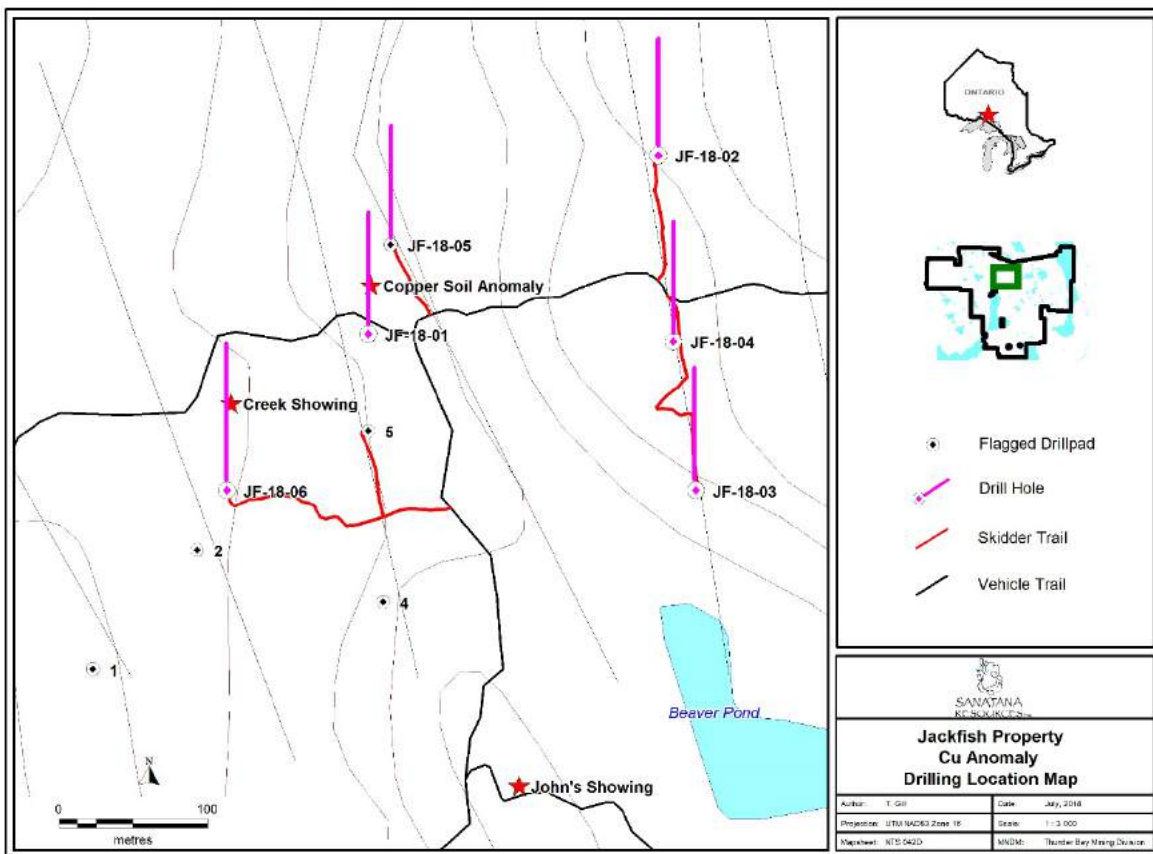

These three coincident soil geochemical, magnetic and EM bedrock anomalies were considered a high priority and warranted drill testing as part of the proposed initial drill program. The Company has completed a six-BTW diamond drill hole drilling program at the copper soil anomaly target area, for a total of 930.4 metres drilled. A total of 232 half-core samples from all the drilling were dispatched to Activation Laboratories Ltd. in Thunder Bay primarily for fire assay analysis for gold as well as analyses for other metals and to help with geological interpretation of the drill-hole logging. Results of these analyses are pending.

**SANATANA RESOURCES INC.**  
**Management's Discussion and Analysis**  
**Year Ended March 31, 2018**

*Table of Drill Hole Information:*

Hole #	Easting	Northing	Dip	Direction	Depth
JF-18-01	504,750	5,411,160	-60°	000°	153.1
JF-18-02	504,945	5,411,280	-60°	000°	144
JF-18-03	504,970	5,411,055	-60°	000°	150
JF-18-04	504,955	5,411,155	-60°	000°	150
JF-18-05	504,765	5,411,220	-60°	000°	148.8
JF-18-06	504,655	5,411,055	-60°	000°	184.5
					930.4

*Drill Hole Location Map:*

The Company continues to undertake infill ground VLF-EM and prospecting to refine the geophysical modelling of the key drill targets and prepare collar locations for further drilling. The initial 1,500-metre drill program is intended to test the high priority targets starting with the drilling completed at the copper soil anomaly and continuing with drilling at Rudy #7, the Cliff, North Zone

**SANATANA RESOURCES INC.**  
**Management's Discussion and Analysis**  
**Year Ended March 31, 2018**

---

and Rudy #5. However, continuation of the drill program to test these targets will rely on remedying the Richards *et al* property default notice. The Company has received the exploration plan and permit for the Alto Ventures Empress property from the Ministry of Northern Development and Mines that would allow for drilling of the Section 6 east target. The Company has had to re-submit the permit application to continue to use the engineered bridge installed over a watercourse in order to access the Cliff target on the Richards property from the Ministry of Natural Resources and Forestry.

The current geological framework as interpreted by the Company and its consultants, and reinforced by the geophysics notes that the majority of the mineral showings and historical mining in the district coincide with structures that extend through and displace the granite/greenstone boundary. These observations are further reinforced at the OGS where recent mapping has also independently identified the importance of these structures. To our knowledge Sanatana will be the first group to purposely target portions of these structures with drilling.

The information above was prepared under the supervision of Troy Gill, BSc, MAIG, Exploration Manager for Sanatana. Mr. Gill is a Qualified Person for the purposes of *NI 43-101 – Standards of Disclosure for Technical Projects* and has reviewed and approved the technical information disclosed in this MD&A.

*Principal Agreement Terms*

As discussed above, the option agreements allow Sanatana to acquire a 100% interest in the Jackfish Property from three vendor groups: (1) Alto; (2) Wahl; and (3) Richards et al. In June 2018, the Company and two of the vendor groups agreed to defer payment of the second cash installment by six months until December 2018 and as consideration agreed to issue additional shares. To date, the third vendor has not agreed to a deferral and accordingly the Company is in default on its obligations for this property see *Jackfish Impairment* below.

Under the revised schedule, to earn a 100% interest in the Jackfish Property under the option agreements, Sanatana must, in aggregate:

- (a) Pay cash of \$375,000 over a 24-month period (\$125,000 paid to the date of this MD&A):

	Alto	Wahl	Richards et al	Total
June 2017 (paid)	\$ 50,000	\$ 25,000	\$ 50,000	\$ 125,000
No later than June 2018 (in default)	-	-	50,000	50,000
No later than December 2018	75,000	25,000	-	100,000
No later than June 2019	-	-	100,000	100,000
<b>Total</b>	<b>\$ 125,000</b>	<b>\$ 50,000</b>	<b>\$ 200,000</b>	<b>\$ 375,000</b>

**SANATANA RESOURCES INC.**  
**Management's Discussion and Analysis**  
**Year Ended March 31, 2018**

---

- (b) Issue 10,850,000 of the Company's common shares over a 24-month period (3,000,000 shares issued to the date of this MD&A):

	Alto	Wahl	Richards et al	Total
June 2017 (issued)	1,000,000	1,000,000	1,000,000	3,000,000
No later than June 2018 (in default)	-	-	2,000,000	2,000,000
No later than August 2018	2,200,000	1,650,000	-	3,850,000
No later than June 2019	-	-	2,000,000	2,000,000
<b>Total</b>	<b>3,200,000</b>	<b>2,650,000</b>	<b>5,000,000</b>	<b>10,850,000</b>

- (c) Reimburse exploration expenditures of \$20,000 on closing (paid).
- (d) Incur exploration expenditures of \$600,000 over a 24-month period, of which \$175,000 must be spent in the first 12 months (condition met) and \$50,000 spent in the first 18 months.
- (e) Pay cash of \$1,000,000 to Richards et al following receipt of a positive feasibility study.
- (f) Pay net smelter return ("NSR") royalties on metals of 2% to Wahl and Richards et al, and a gross overriding royalty on diamonds of 2% to Wahl, all of which have an option to reduce these royalties to 1% for cash payments of \$1,000,000 to each party.
- (g) Pay an NSR royalty on metals of 1% to Alto, for which a 2% NSR royalty already exists in a previous assignment agreement and which royalty has an option to be reduced to 1% for cash payment of \$1,000,000.
- (h) Pay an additional NSR royalty to Alto of 0.33%, to Wahl of 0.33% and to Richards et al of 0.34% on any new property acquired within the area of interest contemplated in the option agreements.

***Santoy Property***

In January 2018, Sanatana signed an asset purchase agreement, which was approved by the TSX-V in April 2018, with Brian Fowler and Christian Carl ("Fowler and Carl") to acquire the Santoy Property which is adjacent to the Company's Jackfish Property.

**SANATANA RESOURCES INC.**  
**Management's Discussion and Analysis**  
**Year Ended March 31, 2018**

The three newly acquired claims originally comprised 31 units making up three mining claims covering 479 hectares (1,184 acres). Now under the new MLAS introduced April 9, 2018, the property has increased to an area of 551 hectares (1,362 acres) made up of 32 cell mining claims, half of which are boundary cells.

The Santoy Property ties onto the Jackfish Property covering the southeast extension of the North-Hematite-Cliff gold mineralized trend, including part of the Terrace Bay Batholith granodiorite as well as the contact zone and part of the southern arm of the Schreiber-Hemlo greenstone belt from where the main fault that defines the trend originates. There is also a strongly conductive unit in the greenstone belt sequence delineated in the publicly available Ontario Geological Survey airborne geophysical survey data and relates directly to a historic nickel-copper showing. Elevated cobalt, copper, lead and silver values in soil sample data reviewed from previous assessment reports may also be related to this conductive unit. There is no recorded drilling within the property. The Company has not undertaken any new fieldwork on the Santoy Property.

**Principal Agreement Terms**

To acquire a 100% interest in the property, Sanatana:

- paid Fowler and Carl \$12,500 cash;
- issued 250,000 of the Company's common shares to Fowler and Carl; and

**SANATANA RESOURCES INC.**  
**Management's Discussion and Analysis**  
**Year Ended March 31, 2018**

---

- agreed to pay a NSR royalty on metals of 2% upon the commencement of commercial production to Fowler and Carl, with an option to reduce the royalty to 1% for cash payment of \$1,000,000.

**Financial**

Financial amounts in the narrative have been rounded to the nearest thousand dollars.

***Selected Annual and Quarterly Financial Data***

March 31, 2018	65,533	315,034	(540,669)	(0.00)

<sup>1</sup> Sum of quarterly loss per share may not equal year-to-date amounts due to rounding.

The Company is an exploration stage company and has not generated any sales or revenues, nor has it had any extraordinary items or discontinued operations in the most recent eight fiscal quarters. As the Company is still in the exploration stage, variances in its quarterly losses are not affected by sales or production-related factors. Variances by quarter reflect overall exploration and corporate activity and certain factors that may not recur each quarter. Significant variations from the normal level of operating loss include:

- March 31, 2017 – The Company incurred exploration expenses largely offset by a gain on the settlement of liabilities at less than their face value.
- September 2017 – The Company issued share purchase options that increased the quarterly loss by approximately \$60,000.
- March 31, 2018 – The Company recorded a \$336,000 impairment provision regarding the Jackfish Property

***Jackfish Impairment***

As discussed above, the Company is in default under one of the three option agreements, with Richards et al, for the Jackfish Property. The land covered by the in-default option agreement is separate from the land addressed by the other two agreements and the Company's ability to explore and develop the other two properties is not adversely affected by the default on the Richards et al property.

The Richards et al option agreement provides for a 60-day cure period upon notice, which notice was provided on July 2, 2018. Accordingly, the Company must remedy the default by August 31, 2018 or it will lose its rights to the Richards et al lands. In view of the failure to issue the shares and make the required option payment to Richards et al, the Company has impaired the carrying value of its interest in the Richards et al property based on accumulated acquisition and exploration costs to March 31, 2018. Should the Company reach an agreement with Richards et

**SANATANA RESOURCES INC.**  
**Management's Discussion and Analysis**  
**Year Ended March 31, 2018**

---

al, it is possible that the impairment will be reversed, but currently there is no basis for concluding that it will be possible for the parties to reach terms.

***Results of Operations for the Year***

The principal factors necessary to understand the Company's results of operations are:

- Exploration and property investigation expenses represent \$27,000 spent on analysis of Jackfish data and exploration planning prior to receipt of TSX-V approval and \$30,000 for investigation of a new mineral property.
- Investor relations expenses relate to investor communications, including maintaining and updating the website and disseminating news releases. Investor relations expenditures were unusually high in the fourth quarter of fiscal 2017 relating to the purchase of the Jackfish Property and are currently at a more normal level.
- Management fees and salaries represent amounts paid to officers, employees and contractors and related benefits, net of amounts capitalized to exploration and evaluation assets or allocated to exploration or property investigation costs. Fiscal 2017 included a relatively high proportion of Sanatana's exploration manager's salary as the Company did not have an active project.
- Professional fees are amounts due to lawyers and auditors. Legal fees were higher in the comparative period due to the purchase of Jackfish.
- Rent relates to the Company's office premises and a storage locker. The Company reduced its office space in stages through fiscal 2016 and 2017, with the result that rent expense declined. The Company has now leased office space and this expense has increased and will remain at current levels for the foreseeable future.
- Share-based compensation represents the fair value of options granted to directors, officers, employees and contractors calculated using the Black-Scholes option pricing model. The Company awarded options in September 2017 and will be recognizing the fair value of the options as the options vest until March 2019.
- Travel and accommodation represents the cost for management travel to Sanatana's exploration and evaluation assets and for corporate development activities. Travel and accommodation expense fluctuates significantly from period to period depending on the initiatives under way.
- Other expense in the prior period represents adjustments to an obligation to issue shares to a former director as part of a settlement.
- Interest and other income includes proceeds of \$45,000 on the sale of exploration equipment from the Mackenzie diamond property that had been fully impaired in a prior period.
- Impairment of exploration and evaluation assets relates to the impairment taken on the Jackfish Property, see *Jackfish Impairment* above.

**SANATANA RESOURCES INC.**  
**Management's Discussion and Analysis**  
**Year Ended March 31, 2018**

**Results of Operations for the Fourth Quarter**

Comprehensive Loss for the Quarter Ended March 31	2018	2017
	\$	\$
<b>Expenses</b>		
Depreciation	1,809	1,809
Exploration	67,395	28,029
Filing fees	7,503	6,575
Investor relations	5,574	28,589
Management salaries and wages	49,746	73,347
Professional fees	28,976	42,279
Share-based compensation	57,300	-
Other operating expenses	32,515	26,489
Loss before the undernoted	<u>(250,818)</u>	<u>(207,117)</u>
Impairment of exploration and evaluation assets	(336,000)	-
Other expense	-	5,000
Gain on settlement of debt	-	26,554
Interest and other income	46,149	-
Loss for the period	<u>(540,669)</u>	<u>(175,563)</u>

The Company's results of operations in the fourth quarter were generally consistent with prior periods and the comparative period other than:

- the Company incurred expenses in fiscal 2018 regarding a prospective property but had not secured exploration rights at the fiscal year end or subsequently;
- in fiscal 2017, the Company incurred legal fees and expensed exploration expenditures on the Jackfish Property;
- in fiscal 2017, the salary of the Company's geologist was expensed as he was working on evaluating potential acquisitions, while in 2018 his salary was capitalized to the Jackfish Property, resulting in a decrease in expense although the overall payroll expenditures were similar;
- in the current period, the Company impaired the carrying value of its Jackfish Property; and,
- in the prior period, the Company settled amounts due to employees, officers and then-current and former directors at less than their face value.

**Liquidity**

At March 31, 2018, the Company had cash and cash equivalents of \$66,000 (March 31, 2017 - \$1,170,000) and a working capital deficiency of \$133,000 (March 31, 2017 - working capital of \$880,000). Cash on hand is sufficient to fund little more than one month of activities as long as a certain vendor continues to forebear on payment of a trade account. Specific factors affecting the Company's liquidity are:

- To fulfill its commitment under flow-through financings, the Company must expend \$139,000 on mineral exploration before December 31, 2018 and \$500,000 before December 31, 2019. As of the date of this MD&A, the Company does not have enough cash to discharge its current liabilities or fulfill its flow-through expenditure obligations.

**SANATANA RESOURCES INC.**  
**Management's Discussion and Analysis**  
**Year Ended March 31, 2018**

---

- In May and June 2018, the Company closed two tranches of a flow-through financing that raised gross proceeds of \$500,000.
- The Company has option payment and exploration obligations relating to the Jackfish Property, as detailed above.
- The Company has a premises lease obligation until December 2018.

In the longer term, Sanatana expects to address its funding needs through private placements but may not be able to do so on acceptable terms or at all. If the Company's share price improves, warrant holders may exercise their share purchase warrants, but there can be no assurance that they will do so.

***Related Party Transactions***

At March 31, 2018, the Company had four employees and arrangements with contractors to provide certain administrative, accounting and management services. In addition, certain directors, officers and significant shareholders provide management and consulting services to the Company.

The Company has entered into change-of-control agreements with its directors, officers and employees. These agreements provide that in the event of a change of control, as defined, directors and officers of the Company may be eligible to receive termination payments within 12 months of the change of control if they resign or are terminated. The amounts potentially payable are to \$144,000 to Buddy Doyle and \$558,000 in aggregate to other employees. The change of control agreements confirm that unvested stock options vest immediately on a change of control.

***Critical Accounting Estimates***

The Company's policy is to capitalize exploration and evaluation costs in certain circumstances. There can be uncertainty as to the value of those carrying costs and in title in the underlying assets.

The Company has losses carried forward which should be available to offset any likely taxable income, but flow-through accounting requires estimates of tax effects that could be material.

Share-based payment transactions such as options are subject to assumptions which can have a material bearing on the recorded expense.

***Financial Instruments***

Sanatana does not have any financial instruments that are likely to be settled for other than face value, so the risk to the business from financial instruments is low.

**Share Capital**

The Company had 138,479,834 and 135,479,834 common shares issued and outstanding at March 31, 2018 and at March 31, 2017 respectively.

***Share Issuance***

In June 2017, the Company issued 3,000,000 common shares as partial consideration for the Jackfish Property.

In April 2018, the Company issued 250,000 common shares as partial consideration for the Santoy Property. See *Santoy Property* above.

**SANATANA RESOURCES INC.**  
**Management's Discussion and Analysis**  
**Year Ended March 31, 2018**

---

In July 2018, the Company committed to issue 3,850,000 common shares to Alto and Wahl, pursuant to the Jackfish Property option agreements, as amended, see *Jackfish Property* above.

***Private Placement***

In May 2018, the Company announced a non-brokered private placement to issue up to 12,000,000 flow-through shares at \$0.05 per flow-through shares for gross proceeds of up to \$600,000. Each flow-through share consists of one common share in the capital of the Company that is a "flow-through share" within the meaning of the *Income Tax Act* (Canada).

In May 2018, the Company closed the first tranche of the private placement issuing 6,000,000 flow-through shares at \$0.05 per unit for gross proceeds of \$300,000. All securities issued in connection with the first tranche closing are subject to a statutory hold period expiring on September 4, 2018 in accordance with applicable securities legislation. In June 2018, the Company closed the second and final tranche of the private placement issuing 4,000,000 flow-through shares at \$0.05 per unit for gross proceeds of \$200,000. All securities issued in connection with the second tranche closing are subject to a statutory hold period expiring on October 6, 2018 in accordance with applicable securities legislation. The proceeds from the flow-through financing will be used for exploration on the Company's Jackfish Property.

***Share Option Plan***

*Plan Description*

The Company has a rolling share option plan that provides an incentive to directors, officers, employees, management and others who provide services to the Company. Under the option plan, a maximum of 10% of the issued and outstanding common shares at the time an option is granted, less common shares reserved for issuance on exercise of options then outstanding under the option plan, are reserved for options to be granted at the discretion of the board to eligible optionees.

Options granted under the option plan are non-assignable and non-transferable and are issuable for a period of up to ten years. In the case of employment or other contracting arrangements of a director, officer, employee or consultant of the Company being terminated, the options will immediately terminate without right to exercise. The board of directors of the Company determines the exercise price, which may be no less than the discounted market price, as defined in the option plan, at the day of grant. The Company's shareholders re-approved the plan in December 2017.

*Option Grants, Forfeitures and Expiry*

In June 2017, options to purchase up to 2,550,000 common shares expired unexercised and in September 2017, options to purchase up to 100,000 common shares expired unexercised.

In September 2017, the Company granted incentive stock options to directors, officers, employees and contractors of the Company to purchase up to 6,800,000 common shares. The options have an exercise price of \$0.06, are exercisable for a period of five years and vest in stages with 25% vesting immediately and the remainder to vest 25% every six months from the date of the grant. Of the options granted, 5,000,000 were awarded to directors and officers of the Company.

**SANATANA RESOURCES INC.**  
**Management's Discussion and Analysis**  
**Year Ended March 31, 2018**

---

***Dividends***

The Company has not paid any dividends in the past and does not expect to pay any dividends in the foreseeable future.

***Outstanding Share Information***

As of the date of this MD&A, the Company had the following securities issued and outstanding:

- 154,229,834 common shares;
- 14,590,000 warrants to purchase common shares; and
- 8,700,000 stock options.

Fully diluted share capital is therefore 177,519,834 common shares. The Company has entered into option agreements which could result in the issuance of a further 2,250,000 common shares (see *Jackfish Property above*).

**Risks and Uncertainties**

Sanatana's business of mineral resource exploration involves a variety of operational, financial and regulatory risks that are typical in the natural resource industry. The Company attempts to mitigate these risks and minimize their effect on its financial performance, but there is no guarantee that the Company will be profitable in the future; Sanatana's common shares should therefore be considered speculative.

*Capital Markets and Economic Uncertainty*

Sanatana will have to raise additional funds to completely exercise the Jackfish Property options and develop the property, even if it were to find an economic mineral resource. The Company's business plan currently relies on obtaining funding through offerings of its equity.

*Nature of Mineral Exploration and Development Projects*

The business of mineral exploration involves a high degree of risk. Few of the properties that are explored are ultimately developed into mines. The long-term profitability of the Company's operations will be in part directly related to the cost and success of its exploration programs, which may be affected by a number of factors that are beyond the control of the Company.

Mineral exploration is subject to risks which could result in damage to life or property or the environment. The Company's business is subject to disruptions caused by unusual or unexpected formations, formation pressures, fires, power failures, flooding, explosions, cave-ins, landslides, the inability to obtain suitable or adequate equipment or machinery, labour disputes, or adverse weather conditions. Although the Company maintains insurance to cover normal business risks, the availability of insurance for many of the hazards and risks is extremely limited or uneconomical at this time. Through high operating standards, Sanatana works to reduce these risks.

In the event the Company is fortunate enough to discover a sizable deposit, the economics of commercial production depend on many factors, including the cost of operations, the size, quantity and quality of ore concentration of gold, proximity to infrastructure, financing costs and government regulations, including regulations relating to prices, taxes, royalties, land tenure, land use and environmental protection. The effects of these factors cannot be accurately predicted, but any combination of these factors could adversely affect the economics of commencement or continuation of commercial production.

**SANATANA RESOURCES INC.**  
**Management's Discussion and Analysis**  
**Year Ended March 31, 2018**

---

The profitability of the Company's operations will be dependent on the market price of the resources it is seeking, currently gold and diamonds. Resource prices are affected by factors beyond the control of the Company, including international economic and political conditions, levels of supply and demand and international currency exchange rates.

Success in establishing reserves is the result of a number of factors, including the quality of management, the Company's level of geological and technical expertise, the quality of land available for exploration, the availability of suitable contractors and other factors. If mineralization is discovered, the initial phases of drilling may take several years until production is possible, during which time the economic feasibility of production may change. Substantial expenditures are required to establish reserves through drilling, to determine the optimal metallurgical process and to construct mining and processing facilities. Because of these uncertainties, no assurance can be given that exploration programs will result in the establishment or expansion of resources or reserves.

*Impact of Richards et al Lands on Development of the Jackfish Property*

At present, and based on the Company's current understanding of the area's mineralization, the potential loss of the Richards et al property does not have any impact on the Company's ability to develop the adjoining Alto and Wahl lands. As the Company gains a better understanding of the area's geology, it is possible that it will discover that development of the properties is more closely linked than currently understood. Accordingly, if the Company moves to develop the Jackfish Property but does not remedy its default under the Richards et al option agreement, it is possible that the Company may find that the lack of a complete land package adversely affects its ability to fully benefit from its holdings on the Alto and Wahl lands.

*Conflicts of Interest*

Certain of the Company's directors, officers and significant shareholders are or may become shareholders, directors or officers of other natural resource companies, and, to the extent that such other companies may participate in ventures with the Company, these individuals may have a conflict of interest in negotiating and concluding terms respecting the extent of such participation. In the event that such a conflict of interest arises at a meeting of the directors, a director who has such a conflict will abstain from voting for or against the approval of such participation or of its terms. In appropriate cases the Company will establish a special committee of independent directors to review a matter in which one or more directors or officers may have a conflict.

From time to time, the Company, together with several other companies, may be involved in a joint venture opportunity where several companies participate in the acquisition, exploration and development of natural resource properties, thereby permitting the Company to be involved in a greater number of larger projects with an associated reduction of financial exposure in any given project. The Company may also assign all or a portion of its interest in a particular project to any of these companies due to the financial position of the other company or companies.

In accordance with the laws of the province of British Columbia, the directors are required to act honestly and in good faith with a view to furthering the best interest of the Company. In determining whether or not the Company will participate in a particular program and the interest therein to be acquired, the directors will primarily consider the potential benefits to the Company, the degree of risk to which the Company may be exposed, and the financial position of the Company at that time.
